DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 1-8 and 19-20 in the reply filed on 1/31/2008 is acknowledged.

Claims 9-18 and 21-24 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to nonelected inventions, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 19-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 19-20 are directed towards a system comprising means for implementing the applicant's invention. Paragraphs 63-69 of the applicant's specification indicate that each of these claimed means are actually directed towards software modules. Since the claimed system is only comprised of software, it is treated as software per se. Software per se does not fit into any of the statutory categories of invention.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2142

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 and 19-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent Number 5,987,611 to Freund et al. in view of U.S. Patent Number 6,769,009 to Reisman.

As to claim 1, Freund teaches a method of controlling user access to Internet sites, comprising: determining an Internet site that a user is accessing; providing a timer; incrementing said timer with time spent accessing Internet site by said user and blocking said user from accessing the Internet site when said timer reaches a predetermined level (Figure 7A and col. 9, line 64-col. 10, line 43); however Freund does not explicitly teach limiting based on a content category of Internet sites. Freund does suggest that it may be beneficial to limit the access to certain types of content (col. 9, lines 38-41).

Reisman teaches a method of restricting access based on the content category of Internet sites (col. 50, lines 8-19).

It would have been obvious to one of ordinary skill in the Computer Networking art at the time of the invention to combine the teachings of Freund regarding limiting the amount of time a use can spend on an internet site with the teachings of Reisman regarding limiting access to content categories because content categories would allow a user of Freund's system to more broadly characterize rules instead of having to type each website in manually as shown in Figure 7A of Freund. Furthermore the combination of the teachings of Freund and Reisman would produce a predictable result if combined as the categories described by Reisman could easily be plugged into the table in Figure 7A of Freund without any conceptual change to either.

Art Unit: 2142

As to claims 2 and 3, Freund allows a user to pick any arbitrary amount of time.

As to claims 4 and 5, Freund shows that the time limit can be in effect for one day.

As to claim 6, a second rule can be plugged into Figure 7A of Freund for a second content category.

As to claim 7, Freund teaches logging activities (col. 9, lines 17-19).

As to claim 8, Reisman describes how webpages are conventionally cached. Freund does not state that the Freund invention applies to cached webpages. Therefore a user of the Reisman-Freund combination would not be restricted from cached web pages.

As to claims 19 and 20, they are directed towards a system for implementing the method of claims 1 and 8 and are therefore rejected for the same reasoning as claims 1 and 8.
